Introducing our Analytics & DataOps Services on Microsoft Azure:

DRIVE INNOVATION WITH DATA

Using outsourced DataOps & Analytics Service on Microsoft Azure, IT leaders can power data-driven business decisions, without the scale limitations and management complexity of on-premises infrastructure.

DELIVER STABLE, SECURE ANALYTICS ACROSS THE ORGANIZATION

The business looks to you as an IT leader to enable innovation and decision making—while working within budget constraints. Whether as a fully managed, cloud-based platform or a hybrid solution connected to your existing investments, Our DataOps & Analytics Service on Microsoft Azure enables you take advantage of scalable compute and modern tools. Intelligent automation reduces the complexity of managing data, data pipelines, and analytics platforms. You can empower your team to focus on strategic activities.

WHY CLOUD DATAOPS & ANALYTICS SERVICES?

Break through scalability barriers *while managing costs*. Take advantage of data analytics in the cloud so you have the compute muscle needed at any given time, without having to pay for unused capacity.

Reduce the IT backlog *by offloading infrastructure and platform services to Microsoft Azure*. You can focus more resources on business innovation because you no longer need to implement, provision, and manage servers and services. In addition, you can administer security permissions from a centralized portal, so you don't have to run security tests on your own. That makes it simpler to deliver self-service analytics with strong governance.

Use the latest tools and techniques. Take advantage of low-code visual tools and streaming analytics to improve the speed of your workflows. With data and analytics tools that *include Python, R, SAS and Microsoft Synapse Analytics*, you have the power to use your programming language of choice to build, maintain, and govern your analytics environment, all with trusted, enterprise-grade security. We hire and retain highly skilled professionals who specialize in each of these tools to support your business analytics needs.

THE POWER OF DATAOPS & CLOUD ANALYTICS ON MICROSOFT AZURE

➢ Run in the cloud or as a hybrid solution, enabling modern analytics no matter where you are in your cloud journey.
➢ Simplify data transformation and pipeline management and enable governed self-service analytics.
